This product won the Good Design Award 2012 and a special mention for the German Design Award 2014, Home Interior category.

“The project name CTline clearly tells the story of the idea. The profiles of the buildings in big cities have been my source of inspiration. The breakdown of the volumes of the buildings has created a series of staggered floors which may contain several objects, creating a fascinating urban setting. The modular units can be positioned to suit the specific environment and clients’ needs. The open side allows you to see the books collection, beyond the limits of narrow frontal view.”

V. Vasilev
